

## **TASK 2.7**

I want the user to be able to search for Recipes based on their attributes like Name, Ingredients, Cooking Time and Difficulty Level. Therefore I am going to create a search view that will show the search criteria and the filtered recipes choose by the user.

### **Data Analysis**

- **Bar Chart**

In the chart we compare the different recipes with their cooking time, showing which one of the selected recipes takes longer to cook and which one less.

- **Pie Chart**

In the Pie Chart we compare the different recipes selected based on their level of difficulty

- **Line Chart**

In the line chart we display data that shows the cooking time trend, comparing selected recipes with their cooking time.
